

Abstract

A casino gaming station includes a free standing gaming table and a free standing canopy which can be positioned above the gaming table where the canopy is supported by a pedestal positioned adjacent to the table. The gaming table has an upper surface with markings thereon for use in the playing of one of the games of chance of a casino. The pedestal supports an upwardly extending vertical post with the upper end of the post extending horizontally outward of the pedestal and over the table. At the outer end of the vertical extension is the canopy having a motion video camera therein directed downward towards the surface of the table.
